

ET3112 Image Processing and Machine Vision: Introduction

Ranga Rodrigo
ranga@uom.lk

The University of Moratuwa, Sri Lanka

January 2, 2020

Section 1

Introduction to the Course

What Is Image Processing?

- In digital image processing, we manipulate a digital image to produce another digital image, which is an enhanced version of the original image.
- E.g., blurring, noise filtering, color enhancement, segmentation (?).

(a) Noisy image

(b) Gaussian filtered image

(c) Image with salt and pepper noise

(d) Median filtered image

Figure: Filtering

What is computer vision?

- In computer vision, we analyze digital images or videos to make a decision.
- E.g., face detection, object detection, semantic segmentation.

Figure 2: Mask R-CNN results on the COCO test set. These results are based on ResNet-101 [1], achieving a mask AP of 35.7 and running at 5 fps. Masks are shown in color, and bounding box, category, and confidence are also shown.

(a) Mask RCNN Object detection and semantic segmentation

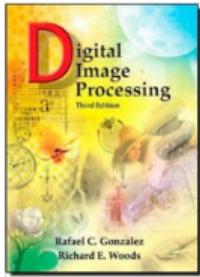

(b) Gaussian filtered image

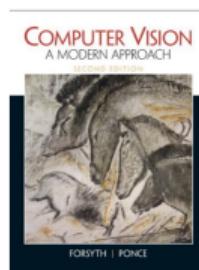

Figure: Examples of computer vision.

Course Requirements

1. Programming assignments: 20%
2. Four assignments
 - ▶ Expect the first one in the next couple of classes.
 - ▶ We use OpenCV and Python. Revise your Python and Numpy knowledge.
 - ▶ Other platforms, e.g., MATLAB or OpenCV with C++, are fine too.
3. Grading

| Item | Date | Weight | Minimum | Comments |
|-------------------|-----------------|--------|---------|----------------------|
| In-class quizzes | Surprise | 5% | 50% | Easy |
| Assignment 1 | To be scheduled | 5% | 50% | Easy |
| Assignment 2 | To be scheduled | 5% | 50% | Easy |
| Assignment 3 | To be scheduled | 5% | 50% | Moderately difficult |
| Assignment 4 | To be scheduled | 10% | 50% | Moderately difficult |
| Final examination | To be scheduled | 70% | 50% | ? |

Tips for Successful Completion

To extract meaning from pixels.

1. Mindset: "I want to solve this vision problem. What are the tools available? How have others solved it? How should I go about solving it?"
2. Attend every single lecture.
3. Go through the material the night before and engage in a good discussion in class.
4. Implement at least one algorithm discussed in class before the next class. This is in addition to the assignments.

Academic Integrity Policy

- You may discuss the assignments with each other. However, you must code on your own, and make the submissions on your own.
- You may benefit from the code and information on the internet, as long as you do not borrow code for the main theme of the assignment.
- Acknowledge your sources.

The Goal of Computer Vision

(a) What we see.

| | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| 0 | 3 | 2 | 5 | 4 | 7 | 6 | 9 | 8 |
| 3 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| 2 | 1 | 0 | 3 | 2 | 5 | 4 | 7 | 6 |
| 5 | 2 | 3 | 0 | 1 | 2 | 3 | 4 | 5 |
| 4 | 3 | 2 | 1 | 0 | 3 | 2 | 5 | 4 |
| 7 | 4 | 5 | 2 | 3 | 0 | 1 | 2 | 3 |
| 6 | 5 | 4 | 3 | 2 | 1 | 0 | 3 | 2 |
| 9 | 6 | 7 | 4 | 5 | 2 | 3 | 0 | 1 |
| 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

(b) What computer sees.

Reconstruction in Construction Industry

RECONSTRUCT INTEGRATES REALITY AND PLAN

Visual Asset Management

Reconstruct 4D point clouds and organize images and videos from smartphones, time-lapse cameras, and drones around the project schedule. View, annotate, and share anywhere with a web interface.

4D Visual Production Models

Integrate 4D point clouds with 4D BIM, review "who does what work at what location" on a daily basis and improve coordination and communication among project teams.

Predictive Visual Data Analytics

Analyze actual progress deviations by comparing Reality and Plan and predict risk with respect to the execution of the look-ahead schedule for each project location, to offer your project team with an opportunity to tap off potential delays before they surface on your jobsite.

THE SUMMER VISION PROJECT
Seymour Papert

The summer vision project is an attempt to use our summer workers effectively in the construction of a significant part of a visual system. The particular task was chosen partly because it can be segmented into sub-problems which will allow individuals to work independently and yet participate in the construction of a system complex enough to be a real landmark in the development of "pattern recognition".

Connections to Other Disciplines

Module Outline

1. Early vision
 - 1.1 Point operations, liner filtering, and edge detection
 - 1.2 Cameras, light, and color
 - 1.3 Feature extraction
 - 1.4 Optical flow
 - 1.5 Morphological processing
 - 1.6 Frequency domain processing.
2. Mid-level vision
 - 2.1 Fitting: least squares, total squares, RANSAC, Hough lines
 - 2.2 Alignment
 - 2.3 Image stitching
3. Multiple-View Geometry
 - 3.1 Epipolar geometry
 - 3.2 Two-view stereo
 - 3.3 Structure from motion
4. Recognition
 - 4.1 Basic classification
 - 4.2 Object detection
 - 4.3 Segmentation
 - 4.4 Deep learning in classification and detection
